Unidex ERP Full Schema Reference

This document summarizes the planned full ERP database schema from `schema.mysql.sql` in a cleaner, business-friendly format.

Full Table List

roles

Column	Type	Notes
id	BIGINT UNSIGNED	Primary key, auto increment
code	VARCHAR(50)	Unique, required
name	VARCHAR(100)	Required
created_at	TIMESTAMP	Default current timestamp

users

Column	Type	Notes
id	BIGINT UNSIGNED	Primary key, auto increment
role_id	BIGINT UNSIGNED	Foreign key to roles.id
full_name	VARCHAR(150)	Required
email	VARCHAR(190)	Unique, required
password_hash	VARCHAR(255)	Required
is_active	TINYINT(1)	Default 1
created_at	TIMESTAMP	Default current timestamp
updated_at	TIMESTAMP	Auto update timestamp

companies

Column	Type	Notes
id	BIGINT UNSIGNED	Primary key, auto increment
owner_user_id	BIGINT UNSIGNED	Foreign key to users.id, nullable
company_name	VARCHAR(200)	Required
legal_name	VARCHAR(200)	Nullable
gstin	VARCHAR(15)	Unique, nullable
state_name	VARCHAR(100)	Required
address_line1	VARCHAR(200)	Nullable
address_line2	VARCHAR(200)	Nullable
city	VARCHAR(100)	Nullable
postal_code	VARCHAR(20)	Nullable
country_name	VARCHAR(100)	Default India
phone	VARCHAR(30)	Nullable
email	VARCHAR(190)	Nullable
created_at	TIMESTAMP	Default current timestamp
updated_at	TIMESTAMP	Auto update timestamp

customers

Column	Type	Notes
id	BIGINT UNSIGNED	Primary key, auto increment
company_id	BIGINT UNSIGNED	Foreign key to companies.id
customer_code	VARCHAR(50)	Required
customer_name	VARCHAR(200)	Required
gstin	VARCHAR(15)	Nullable
state_name	VARCHAR(100)	Required
email	VARCHAR(190)	Nullable
phone	VARCHAR(30)	Nullable
address_line1	VARCHAR(200)	Nullable
address_line2	VARCHAR(200)	Nullable
city	VARCHAR(100)	Nullable
postal_code	VARCHAR(20)	Nullable
country_name	VARCHAR(100)	Default India
is_active	TINYINT(1)	Default 1
created_at	TIMESTAMP	Default current timestamp
updated_at	TIMESTAMP	Auto update timestamp

products

Column	Type	Notes
id	BIGINT UNSIGNED	Primary key, auto increment
company_id	BIGINT UNSIGNED	Foreign key to companies.id
product_code	VARCHAR(50)	Required
product_name	VARCHAR(200)	Required
product_type	ENUM('service','product')	Default service
hsn_sac_code	VARCHAR(20)	Nullable
unit_name	VARCHAR(30)	Default Nos
default_rate	DECIMAL(12,2)	Required
gst_rate	DECIMAL(5,2)	Required
is_active	TINYINT(1)	Default 1
created_at	TIMESTAMP	Default current timestamp
updated_at	TIMESTAMP	Auto update timestamp

invoices

Column	Type	Notes
id	BIGINT UNSIGNED	Primary key, auto increment
company_id	BIGINT UNSIGNED	Foreign key to companies.id
customer_id	BIGINT UNSIGNED	Foreign key to customers.id
created_by_user_id	BIGINT UNSIGNED	Foreign key to users.id, nullable
invoice_number	VARCHAR(50)	Required
invoice_date	DATE	Required
place_of_supply_state	VARCHAR(100)	Required
supply_type	ENUM('intra_state','inter_state')	Required
notes	TEXT	Nullable
subtotal_amount	DECIMAL(14,2)	Required
cgst_amount	DECIMAL(14,2)	Default 0
sgst_amount	DECIMAL(14,2)	Default 0
igst_amount	DECIMAL(14,2)	Default 0
grand_total_amount	DECIMAL(14,2)	Required
status	ENUM('draft','sent','paid','cancelled')	Default draft
created_at	TIMESTAMP	Default current timestamp

Column	Type	Notes
updated_at	TIMESTAMP	Auto update timestamp

invoice_items

Column	Type	Notes
id	BIGINT UNSIGNED	Primary key, auto increment
invoice_id	BIGINT UNSIGNED	Foreign key to invoices.id
product_id	BIGINT UNSIGNED	Foreign key to products.id, nullable
line_number	INT	Required
item_name	VARCHAR(200)	Required
hsn_sac_code	VARCHAR(20)	Nullable
quantity	DECIMAL(12,2)	Required
unit_rate	DECIMAL(12,2)	Required
gst_rate	DECIMAL(5,2)	Required
taxable_value	DECIMAL(14,2)	Required
line_total_amount	DECIMAL(14,2)	Required
created_at	TIMESTAMP	Default current timestamp

payments

Column	Type	Notes
id	BIGINT UNSIGNED	Primary key, auto increment
invoice_id	BIGINT UNSIGNED	Foreign key to invoices.id
payment_date	DATE	Required
amount	DECIMAL(14,2)	Required
payment_mode	VARCHAR(30)	Required
reference_number	VARCHAR(100)	Nullable
notes	TEXT	Nullable
created_at	TIMESTAMP	Default current timestamp

Dependency Order

Create these tables in this order:

1. roles
2. users
3. companies
4. customers
5. products
6. invoices
7. invoice_items
8. payments

This order works because each table is created only after the tables it references already exist.

Practical Development Order

1. `companies`
2. `customers`
3. `products`
4. `invoices`
5. `invoice_items`
6. `payments`
7. `users`
8. `roles`

This is the more practical order for current Unidex development because company, customer, product, and billing are the first business modules in use.

Module-wise Mapping

Admin

- `companies`
- `users`
- `roles`

Customers

- `customers`

Products

- `products`

Sales / Billing / Invoice

- `invoices`
- `invoice_items`
- `payments`

GST / Tax Logic

- `companies.state_name`
- `customers.state_name`
- `invoices.supply_type`
- `invoices.cgst_amount`
- `invoices.sgst_amount`
- `invoices.igst_amount`
- `invoice_items.gst_rate`

Important Note

The current live database still has only the simplified `customers` table. This full schema is the planned ERP target structure for the complete backend.
